PROJECT WORKS
Delivery/loading ramp to Melville Hall demolished.

Civil and structural works have commenced with a piling rig, excavators, concrete pump and an occasional crane already on site.

There is increased construction traffic to Ellery Crescent with truck and vehicle movements making deliveries to site.

The tower crane base has been excavated and poured along with the first of the building footings and pads.

The in-ground scope will continue until the end of August 2018.

A specialist acoustic screen has been installed to absorb the construction noise to the adjoining edge of Melville Hall.

UPCOMING CHANGES
Site sheds will be installed to the meadow, the rear of the site, by the end of August 2018.

Ongoing increased activity to site and increased construction traffic along Ellery Crescent.

Increased construction noise level will recommence.

Excavation will continue and there will be a progressive increase in concreting works.

• Excavation for the new building has commenced
• The concrete structure has commenced
• Large civil works machinery will be on site till the end of August 2018
• Neighbours can expect increased construction noise and dust
• All noise and dust levels will be monitored at all times
