The RSSS Project has commenced. Over the next few weeks there will be a transition on site from a dormant construction site to a hive of activity.

The most substantial change to the site has been the implementation of the final phase of the temporary traffic and roadway changes on Ellery Crescent. The change is the incorporation of one road lane into the construction site thus necessitating the introduction of traffic lights.

Excavation works will commence on site from 30 July, 2018. This will include initial demolition works on the ramp adjacent to Melville Hall.

Sound insulation material is being used in scaffolding adjacent to Melville Hall to minimise noise disruption.

- Pauline Griffin Building demolition has been completed with all clearances received for the removal of hazardous materials
- Excavation equipment to arrive on site to commence digging.
- Temporary traffic and roadway changes to Ellery Crescent are complete
- **EXCAVATION:** Demolition and excavation works will commence on site on 30 July, 2018, this will include machinery on site and truck movements.
- **NOISE:** construction activity will commence, the construction noise will now recommence.
- **TRAFFIC CHANGES:** We ask the community to be mindful of the changes in traffic arrangements around the site, especially due to its proximity to some of the busiest areas on Acton campus, the Pop-Up Village and Kambri.
