PROJECT WORKS

The building structure works are ongoing. Works on the southern side of the building will now catch-up to the structure on the northern side.

There will be continuous deliveries throughout the development of the concrete structure. All traffic movements and site access are being guided by the Ellery Crescent Temporary Traffic Management Plan.

Fit-out scope has commenced on site, which will increase deliveries.

The period between Easter and Anzac Day will see minimal activities.

UPCOMING CHANGES

Some temporary traffic management at the front of Beryl Rawson building will be modified. The systems are not being used by the construction site and are impeding pedestrian flow.

The site entry has been modified to suit heavy vehicle access during concrete pours.

The placement of the brick façade to the basement level will commence in April.

CONCRETE: there will be two pours during April. This will affect the Ellery Crescent vehicle access.

NOISE: There will be ongoing noise on site during construction of the structure.

- reduced productivity over Easter/Anzac break
- removal of bollards in front of Beryl Rawson building
- increased traffic to Ellery Crescent, notably semi-trailers and concrete trucks
- large machinery on site
