PROJECT WORKS

The building structure works are ongoing, with the level 3 slab poured in mid-February 2019. By the end of February 2019, the north-face of the building reached level 4.

There will be continuous deliveries throughout the development of the concrete structure which will follow the Ellery Crescent Temporary Traffic Management Plan.

As part of the project, a single palm tree along the southern side of the site was relocated to the opposite side of the path (near Centre for Arab and Islamic Studies). The relocation of the palm was to ensure the future of the avenue of palms along the pedestrian/bike route.

Moving of the palm was discussed and coordinated with F&S Gardens and Grounds and reviewed by the arborist responsible for the move.

The Australian National University had received statutory approvals to move the palm in works associated with the project. All necessary care was taken to ensure the long term survival of this tree and others.

UPCOMING CHANGES

Increased traffic along Ellery Crescent is expected to continue, with semi trailers and concrete trucks, scaffold and form-work being delivered.

Site entry has been modified to suit heavy vehicle access during concrete pours.

CONCRETE: we will have multiple concrete pours per month. This will affect Ellery Crescent vehicle access.

NOISE: We will have ongoing noise on site during construction of the structure.

- Concrete structure ongoing
- Increased traffic to Ellery Crescent, notably semi-trailers and concrete trucks
- Large machinery on site
